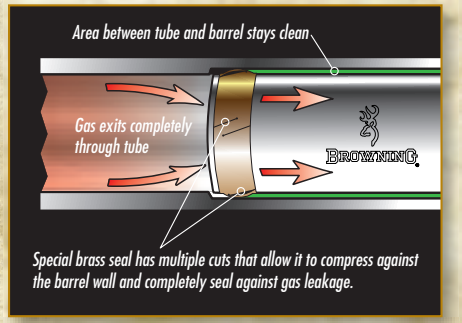
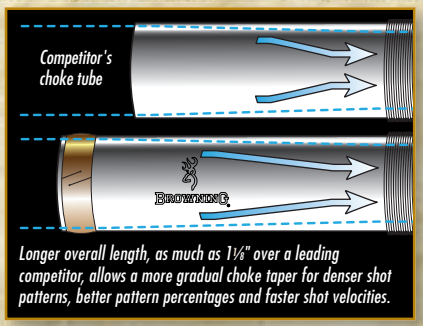
FIREARMS

ASK TEN GUN ENTHUSIASTS WHAT "BROWNING" MEANS TO THEM AND YOU WILL HEAR TEN DIFFERENT RESPONSES. THERE MAY BE A STORY ABOUT SHOOTING MALLARDS IN THE WORST WEATHER IMAGINABLE WITH GRANDPA'S AUTO-5. ONE MIGHT BE ABOUT A YEARNED-FOR CITORI EXPLAINED IN DETAIL FROM THE GRADE OF THE WOOD TO THE ENGRAVING ON THE THUMB LEVER. IF THE STORYTELLER IS A VETERAN, IT MIGHT BE A HARROWING TALE INVOLVING THE FIERCE M2 .50 CALIBER MACHINE GUN. THOUGH THE STORIES VARY GREATLY, THE REVERENCE GIVEN TO THE GUNS IN THE STORIES TOLD IS THE SAME. THANKS TO OVER 125 YEARS OF INNOVATION AND QUALITY, NO OTHER GUNMAKER HAS THE BRAND LOYALTY THAT BROWNING BOASTS.

INVECTOR-DS CHOKE SYSTEM

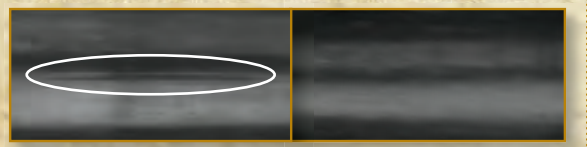
- Invector-DS choke tubes combine muzzle-end threads and thin-wall construction for a longer, more gradually tapered choke tube.
- From Skeet to Full, Invector-DS shot patterns tighten consistently in reliable, evenly scaled steps.
- The longer choke taper produces extremely consistent, dense shot patterns.
- Muzzle threads minimize the flare at the end of the barrel for improved shotgun appearance. A slightly lighter overall barrel weight is achieved for faster swinging and improved balance.
- The more gradual taper of Invector-DS choke tubes reduces shot deformation for fewer flyers and gaps in the pattern and allows higher shot velocities for hard hitting performance.
- A proprietary differential-banded brass seal compresses against the barrel wall when tightened to keep the choke tube threads clean and make installation and removal easier than any other muzzle thread system.
- Invector-DS is standard on A5 and Citori 725 models.
- See pages 50 through 53 for a complete line-up of Invector-DS choke tubes.





INVECTOR-PLUS CHOKE SYSTEM

- The Invector-Plus interchangeable choke tube system works with Vector Pro and back-boring to offer consistent, dense shot patterns with the constriction needed for the shooting situation.
- The longer choke taper inside an Invector-Plus choke tube produces consistent patterns with more uniform densities and fewer flyers.
- The Invector-Plus system is far more durable than the choke systems found in competitors' guns, especially with steel shot.
- Invector-Plus eliminates gases slipping between the choke tube and barrel that could damage the choke tube and the barrel.
- Invector-Plus is standard on 12 and 20 gauge Maxus, Citori, Cynergy, Silver, BPS and BT-99 models.
- See pages 50 through 53 for a complete line-up of Invector-Plus choke tubes.



The competitor's choke tube is grooved and pitted after shooting 500 rounds with steel shot.

Browning's Invector-Plus choke tube is still flawless after 500 rounds with steel shot.

STANDARD INVECTOR

- The Standard Invector interchangeable choke tube system offers consistent, dense shot patterns with the constriction needed for the shooting situation.
- The Standard Invector system is far more durable than the choke systems found in competitors' guns, especially with steel shot.
- Standard Invector eliminates gases slipping between the choke tube and barrel that could damage the choke tube and the barrel.
- Standard Invector is standard on 10, 16 and 28 gauge, and .410 bore Citori, Cynergy, Gold and BPS models.
- See pages 50 through 53 for a complete line-up of Standard Invector choke tubes.

FOR SMALLER SHOOTERS

MICRO MIDAS FIREARMS

- Micro Midas firearms are specifically designed to give younger or smaller shooters a high quality, great fitting firearm.
- Micro Midas firearms are constructed with the same quality components and attention to detail as all Browning firearms.
- Growth Insurance allows Micro and Micro Midas firearms to grow with the shooter.

BROWNING GROWTH INSURANCE PROGRAM

- Micro and Micro Midas models are eligible for the Growth Insurance Program that allows new owners to purchase a full-size stock at 50% off the retail price.
- Growth Insurance allows Micro and Micro Midas firearms to grow with the shooter.
- Offers you a higher rate of return on your firearm investment.
- Visit browning.com for complete details.

VECTOR PRO LENGTHENED FORCING CONE

- Lengthening forcing cones is a popular practice done to increase shot performance. It comes standard on A5, Maxus, BT-99 and 12 and 20 gauge Citori and Cynergy models.
- The Vector Pro design is better than the competitors' forcing cone designs because it is longer with a more gradual taper.
- Back-boring increases bore diameter specifications to decrease friction between the shot cup and the bore to minimize shot deformation and maximize pattern uniformity, consistency and density.
- Vector Pro provides a more gradual constriction on the shot column for fewer deformed pellets. This produces more uniform patterns and keeps more pellets in the central part of the pattern.
- Vector Pro specifications are perfect. A larger bore diameter lets gases slip by the shot cup, resulting in both reduced pellet velocity and blown patterns. A smaller bore diameter means the forcing cone can deform pellets, leading to flyers and poor ballistic performance.

STEEL SHOT PERFORMANCE

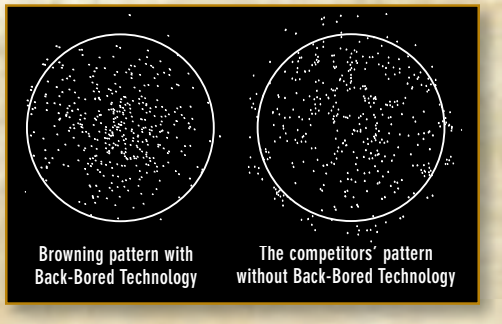
- Browning barrels meet the strictest material and construction quality standards to handle the punishment of steel shot.
- Barrel blanks are made from rolled and tempered steel bars and are stress relieved, then precision drilled, reamed and honed to exacting specifications.

After 500 rounds of steel shot, the higher-quality Browning barrel shows no wear.

The forcing cone of the competition's barrel is pitted and damaged beyond repair after 500 rounds of steel shot.

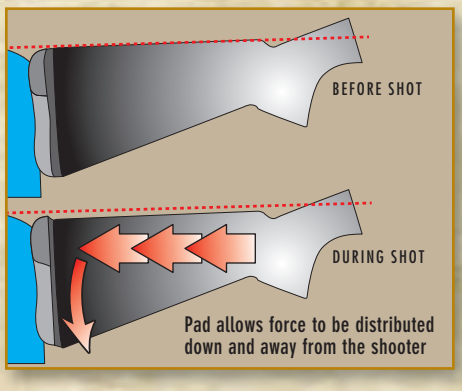
BACK-BORED TECHNOLOGY FOR BETTER PATTERNING

- Back-boring reduces friction between the shot cup and the bore for increased shot pellet velocity, minimized pellet deformity for more uniform patterns and reduced felt recoil. It is standard on 12 and 20 gauge Browning Silver and BPS models.
- Browning back-bore specifications have been perfected and represent the ideal bore diameter needed to minimize shot deformation and maximize pattern uniformity, consistency and density.
- A larger bore diameter lets gases slip by the shot cup, resulting in reduced pellet velocity and blown patterns. A smaller diameter forcing cone can deform pellets, leading to flyers and poor ballistic performance.



INFLEX II TECHNOLOGY RECOIL PAD

- The Inflex II Technology recoil pad is made from a softer new outer material for the best recoil absorbing performance available.
- Internal directional deflection construction guides the comb down and away from your face for greater shooting comfort and faster, more accurate follow-up shots.
- The new pad material is super slippery to prevent snagging on your clothing when shouldering.



INFLEX TECHNOLOGY RECOIL PAD

- The original long-travel Inflex Technology recoil pad system (available on select models) provides a massive 25% decrease in felt recoil on 12 gauge guns and makes recoil virtually non-existent on small gauge guns.
- A slick Parylene coating prevents the pad from snagging on clothing and allows the recoil pad to remain soft.
- Three pad lengths are available in ½" increments to provide length of pull adjustment to fit a wide variety of shooters. See pages 24-25 for accessories.

LOCKING BOLT AND HINGE PIN

- Unlike other low-profile over and unders, the Citori 725 features a transverse-mounted, full-width tapered locking bolt and full-width hinge pin like other Citori models for maximum strength and longevity.
- The locking bolt engages a full-width tapered recess in the monoblock. Tapering the bolt and recess allows the bolt to seat deeper over time, accommodating for wear.

The Citori 725's full-width hinge pin provides maximum strength and long-lasting endurance.

The competitor's trunnions provide only a fraction of the bearing surface that the Citori 725's full-width hinge pin provides.

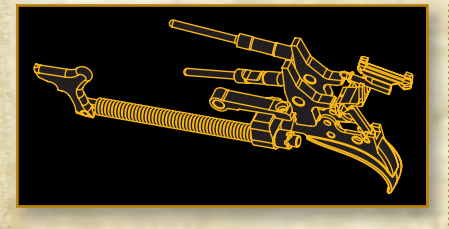
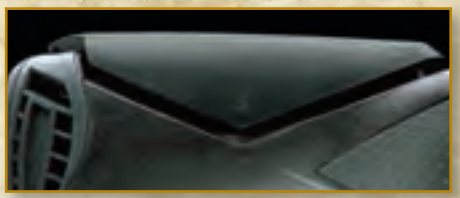
*NOTE: All new guns are shipped with medium pads.



REVERSE STRIKER MECHANICAL TRIGGER

- The Reverse Striker is a striker-based, mechanical trigger system that does not use inertia to set the hammers.
- Reverse Striker offers the benefits of a crisp feel, reduced locktime and less overtravel than other over and under shotguns.
- Because inertia is not needed for the hammers to set, the design eliminates the possibility of the second barrel not firing.
- Cynergy target models are equipped with the Triple Trigger System, allowing finger to trigger length adjustment and the ability to switch between styles of trigger shoes: Wide checkered, narrow smooth or wide smooth canted.

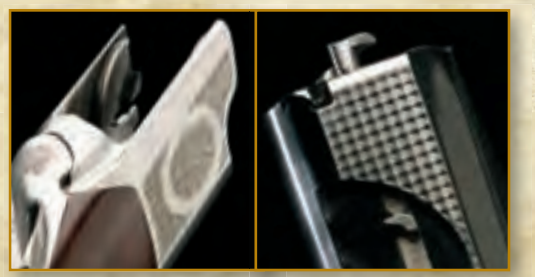


ADJUSTABLE COMB

- Composite models include an integrated, adjustable comb system that allows the gun to be easily customized.
- Drop at comb adjustments are made in ⅛" increments.
- For cast on/cast off customizing, accessory combs are available on page 25.

SUPERIOR GRIPPING SURFACES

- Composite Cynergy models combine molded-in rubberized textured gripping surfaces.
- Proven Dura-Touch® Armor Coating adds a sure hold and a sleek feel in all climates and weather conditions.



MONOLOCK HINGE

- The strong MonoLock Hinge design is the engineering behind the Cynergy's low profile receiver.
- Integrates the monobloc and the hinge for up to 300% more surface area to pivot on than traditional trunnion-style hinges.
- Rectangular locking pins provide extra strength and feature a "Wear-In Relief" that keeps the action tight.
- Jeweling adds a beautiful appearance, smoother function and improves durability.

IMPACT EJECTORS

- Impact Ejectors are aided by the punch of a secondary striker spring for positive, reliable ejection of fired hulls from the chambers.
- Unfired shells are elevated for easy removal.

CHROME CHAMBERS

- Cynergy shotguns feature hard chrome-plated chambers.
- Increased durability and corrosion resistance.

ALL BROWNING FIREARMS ARE SHIPPED WITH A FREE LOCKING DEVICE TO ASSIST IN THE SAFE STORAGE OF FIREARMS.

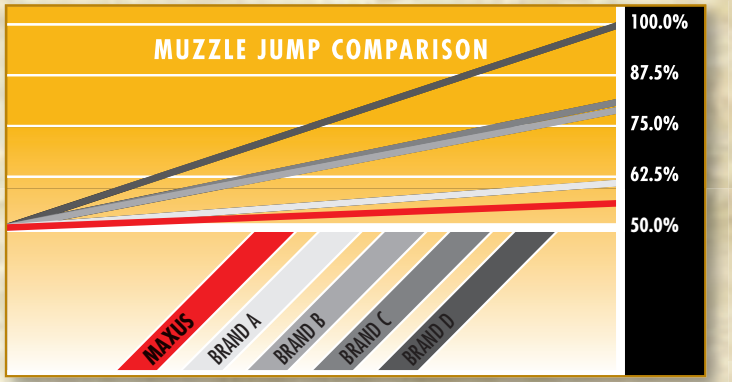
POWER DRIVE GAS SYSTEM

- Extensive research has produced the most reliable gas piston design ever.
- The gas piston features larger exhaust ports that dump gases faster with heavy loads to control recoil.
- 20% longer piston stroke travel increases reliability with light loads.
- A patented, enclosed seal keeps residue out of the action for cleaner operation.

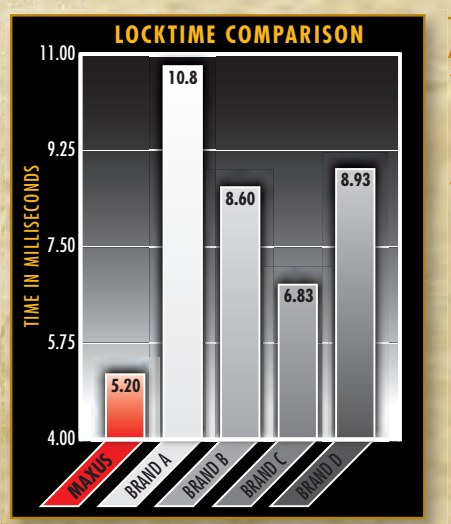
LESS MUZZLE JUMP

- The Power Drive Gas System works with the Inflex Technology recoil pad.
- Reduces muzzle jump up to 44% compared to the competition.



LIGHTNING TRIGGER

- The Lightning Trigger is the finest fire control system ever offered in an autoloading shotgun.
- Offers a smooth, crisp feel with minimal travel.
- Locktimes average .0052 seconds, 24% faster than the nearest competing autoloader.
- Easy to remove for cleaning.



THE SOFTEST SHOOTING AUTOLOADER EVER

- Felt recoil is more than an instantaneous peak force; it is the total energy absorbing experience you feel when a shell is fired.
- The Power Drive Gas System, Inflex Technology recoil pad, back-boring and natural Browning balance combine to transfer up to 18% less total felt recoil force on your shoulder than other autoloaders on the market.

OPTIMAL DIMENSIONS

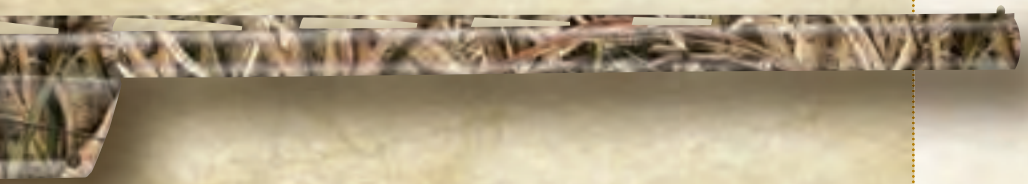
- The Maxus features a trim forearm and close radius pistol grip to maximize control.
- An externally relieved steel magazine tube reduces weight for a faster swing while retaining durability.
- Drop and cast can be tuned using the included stock shim kit.
- A low rib is in line with the top of the receiver and translates into dead-flat point of impact.

SPEED LOCK FORE ARM

- The patented Speed Lock Forearm replaces the traditional screw-on magazine cap.
- Makes taking down the Maxus for cleaning or storage fast.
- Makes attaching or removing the sling a snap.

TURNKEY MAGAZINE PLUG

- The patented TurnKey Magazine Plug is easily removed in seconds using a car key.



SPEED LOAD PLUS

- Patented feeding system sends the first shell loaded into the magazine directly into the chamber.
- Speed Unload feature makes emptying the magazine fast and easy, without chambering and ejecting every shell using the bolt handle.

MAGAZINE CUT-OFF

- The magazine cut-off (not available on Sporting and Deer models) allows the chamber to be unloaded to change loads without cycling a shell from the magazine.
- Useful when hunting different bird species and different loads are instantly required.

LESS RECOIL WITH THE ACTIVE VALVE

- The self-adjusting Active Valve gas system in Silver autoloaders diverts gases from fired shells to operate the action instead of adding to recoil.
- When shooting light loads, most of the gases operate the action.
- With magnum loads, only a small amount of gas is necessary to operate the action, while the remaining gases are vented out the top of the forearm and away from the receiver for cleaner, more reliable operation.
- Superior recoil reduction from the Active Valve means faster, more accurate follow-up shots and all-day shooting comfort regardless of the loads being fired.

PUMP UP THE ACTION.

MOST PUMP SHOTGUNS ARE DESIGNED STRICTLY FOR THE ENTRY LEVEL SHOOTER. THESE MODELS WORK FINE AND ARE PRICED LOW ENOUGH, UNFORTUNATELY THEIR QUALITY ALSO MATCHES THEIR COST. IF YOU DEMAND QUALITY AND RELIABILITY FROM YOUR PUMP SHOTGUN, THEN YOU ARE IN THE RIGHT PLACE. THE BROWNING BPS IS NOTHING SHORT OF LEGENDARY. THE RUGGED STEEL RECEIVER AND DUAL ACTION BARS KEEP YOU PUMPING UNTIL YOUR LIMIT IS FULL, MUD OR DUST, RAIN OR SHINE.

NO MORE MESSING AROUND. WHEN YOUR QUARRY IS BIG, THERE IS NO SUBSTITUTE FOR A BORE SIZE AND HEFTY SHOT PAYLOAD TO MATCH. WHEN IT COMES TO HEAVY HITTERS, A BROWNING 10 GAUGE SHOTGUN SHOULD BE YOUR FIRST CHOICE.

10 GAUGE

BARREL

- Rifled 1 in 28" twist barrel.

- The trigger is screw adjustable from 3 to 5 lbs. and factory pre-set at approximately 3½ lbs.
- An alloy trigger housing contains hard chromed steel components that are highly polished on all critical contact surfaces.
- Does not rely on a secondary finger piece lever, the Feather Trigger was designed right, from the very start.

- An ergonomic magazine-mounted release lets the magazine rotate directly downward and into your hand.

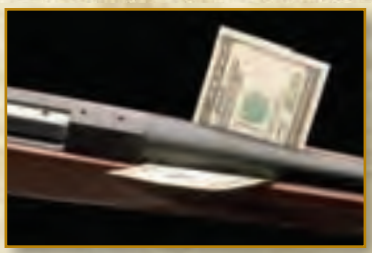
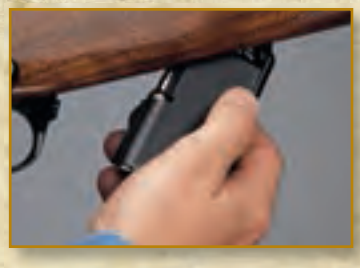
PERSONALIZED ENGRAVING ON THE A-BOLT

- The bolt can be personalized with your name. Call (800) 333-3288.



BEDDED ACTION AND FREE-FLOATED BARREL

- The A-Bolt barrel is free-floated by bedding the front and rear of the action for stability.
- Maintains barrel to stock spacing for consistent accuracy.
- The recessed muzzle crown helps protect the rifling from damage.
- Barrels are triple checked for interior finish, straightness and air-gauged for uniformity.



MAGAZINE

- Hinged floorplate with detachable box magazine makes it simple and fast to load a spare magazine.

MAGAZINE CAPACITY

- Magnum calibers: Three in magazine, one in chamber. Standard calibers: Four in magazine, one in chamber. 223 Rem.: Five in magazine, one in chamber.

BOLT-ACTION

- 60˚ bolt lift cycles fast.
- Helps prevent banging your hand on the scope.
- Bolt incorporates a non-rotating sleeve that runs the full length of the bolt. When unlocked, three guide ribs on the bolt sleeve align with the three locking lugs to allow the bolt to slide smoothly. When locked, the three lugs provide massive bolt strength.
- The A-Bolt feeds smoothly because of its unique, patented cartridge depressor that stays in position, independent of the bolt rotation, as the bolt slides gently over the cartridges in the magazine.
- Recessed bolt face completely surrounding the cartridge base.

ALL BROWNING FIREARMS ARE SHIPPED WITH A FREE LOCKING DEVICE TO ASSIST IN THE SAFE STORAGE OF FIREARMS.

A-BOLT TARGET RIFLES. TACK-DRIVING ACCURACY STRAIGHT FROM THE BOX.

- A-Bolt Target Rifles offer jaw-dropping bolt-action rifle performance with a precise target-style, single-set trigger that is factory-adjusted to approximately 9-14 oz. (250-400 grams) of pull weight in the set mode, and also operates as a conventional trigger with an adjustment range of 4-6 lbs.
- Fitted with a 28" target barrel, the action is carefully bedded into a beautiful laminated stock with a wide fore-end for exceptional stability on sandbags or from a bench rest.
- A fully adjustable comb allows for perfect eye-to-scope alignment, even with large objective target optics.
- A close radius pistol grip ensures an easy reach to the trigger.

THE BOSS DEVICE

- The Ballistic Optimizing Shooting System (BOSS) is designed to maximize accuracy from the A-Bolt.
- The BOSS device quickly and easily tunes barrel harmonics to precisely match the specific ammunition fired, resulting in amazingly tight groups. The BOSS device is available as an option on the Medallion, Composite Stalker, Stainless Stalker, M-1000 Eclipse and Stainless M-1000 Eclipse.

BOSS-CR ACCESSORY

- This accessory is also included with all BOSS-equipped A-Bolt rifles and offers all the accuracy advantages of the original BOSS without the muzzle brake feature.

BOSS-CR ACCESSORY

- The BOSS-CR accessory offers all the accuracy and tunable advantages of the original BOSS device without the muzzle brake feature. By simply replacing the original BOSS forward weight and recoil reduction components with the one-piece, no-hole BOSS-CR accessory, only the reduced recoil of the original BOSS is sacrificed. The BOSS-CR accessory is designed to fit only BAR Mark II and A-Bolt centerfire rifles previously factory-fitted with the BOSS.

- Lightning fast, glass-smooth rack and pinion lever-action.
- Strong rotating head, multiple-lug breech bolt with a recessed bolt face and side ejection.

THERE'S SOMETHING ICONIC ABOUT A LEVER-ACTION RIFLE. MAYBE IT'S THE LOOKS, THE INHERENT SPEED OF CYCLING A ROUND TO THE CHAMBER OR IT'S POSSIBLE WE'VE JUST WATCHED TOO MANY COWBOY MOVIES. WHATEVER THE REASON IS, THE BROWNING BLR IS HERE TO SATISFY THAT LEVER LOVE YOU FEEL — AND THEN SOME. THE ACHILLES HEEL OF MOST LEVER RIFLES IS MARGINAL ACCURACY CAUSED BY THE FLAT-NOSED AMMUNITION. FORTUNATELY, THE BLR UTILIZES A BOX MAGAZINE THAT PROTECTS BULLET TIPS AND OFFERS SUPERIOR ACCURACY THAT RIVALS MANY BOLT-ACTIONS.

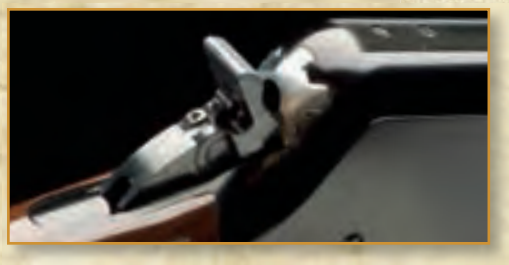
TAKEDOWN FEATURES

- BLR Takedown models are just as accurate and reliable as their unified counterparts but much easier to transport and store.
- The rifle is easily and quickly assembled by simply sliding the barrel half into the receiver half and locking them together with the flip of a lever. The lever mechanically engages a stout locking lug into a recess in the bottom of the receiver. The system is rugged, precise and blends seamlessly into the styling of the rifle.

MAGAZINE

- The flush-mounted detachable box magazine has a capacity of three magnum or four standard rounds in the magazine, plus one in the chamber.



HAMMER

- The folding hammer provides an added measure of safety when the hammer is at half-cock.
- The fold-down hammer has two positions at half-cock so the status of the rifle is readily seen; and four basic positions: Full-cock, half-cock, folded hammer position and the dropped, or fired position.

Scout-Style Scope Mount

SCOPE MOUNTS

- A scout-style scope mount is available as an accessory for BLR Takedown models. This one-piece alloy base mounts forward of the receiver and stays attached to the barrel half of the rifle when disassembled to retain the scope's zero. A long eye-relief scope is required (not included).
- The receiver is also drilled and tapped for conventional scope bases and rings (not included). Three scout-style scope mounts are available for BLR Scout models, depending on the caliber (see chart below).

MAGNUM POWER. THE BAR IS THE ORIGINAL BROWNING AUTOLOADING RIFLE, AND IS STILL THE FINEST. THE BAR COMBINES THE STRENGTH TO FIRE HARD-HITTING MAGNUM CARTRIDGES WITH THE ACCURACY TO SEND THEM DOWN RANGE RIGHT ON TARGET. THE PISTON-OPERATED GAS SYSTEM IS RELIABLE AND SOFTENS FELT RECOIL TO REDUCE MUZZLE CLIMB. THE BAR IS OFFERED IN BOTH RIGHT- AND LEFT-HAND MODELS.

ACTION

- The BAR is a gas-operated autoloader with a high-strength, multiple-lug rotating bolt that locks directly into the barrel.
- The seven-lug bolt and precise breech-to-chamber relationship give the BAR exceptional accuracy and the strength to handle magnum loads.
- The strong and rigid action bar/inertia block link-up improves accuracy by reducing barrel vibration.
- The buffering system reduces wear and stress on the rifle's mechanism.

RIMFIRE

RINGS AND BASES

INTEGRATED SCOPE MOUNT SYSTEM

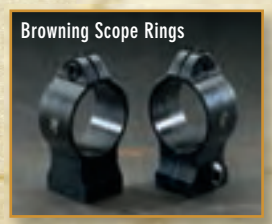
- Integrated Scope Mount Systems unitize the ring and base into a single, ultra-rigid unit.
- Machined from 7000 series aluminum.
- Eliminates alignment problems and the possibility of a loose connection between bases and rings.

SCOPE BASES

- Browning Scope Bases are machined from solid steel.
- Double recoil shoulder design holds rings securely, even under magnum recoil.
- T-Bolt two-piece and SA-22 one-piece base designs are alloy and only compatible with Browning rimfire rings (Code 12365).
- Compatible only with Browning Scope Rings below.
- Maxus, Gold, Silver, BPS and Buck Mark bases are Weaver-type bases and are not compatible with Browning rings.
- BLR Takedown bases are Weaver-type, one-piece scout-style bases for a long eye-relief scope and are not compatible with Browning rings.

SCOPE RINGS

- Ultra-rigid vertically split rings use oversize hardware for extra strength and ease of installation.
- Standard, Intermediate and High rings are available for both 1" and 30mm diameter scopes.
- Compatible with the two-piece Scope Bases for A-Bolt, BAR, BLR shown above and the X-Lock bases for X-Bolt rifles shown at the right.



THE HEIGHT IS DETERMINED BY MEASURING FROM THE TOP OF THE BASE TO THE BOTTOM OF THE SCOPE RING.*

*Barrel contour, optic size and preferred eye relief all affect the fit of the scope on a rifle.

STANDARD (.300")
For scopes with an objective up to 44mm and a standard barrel contour

INTERMEDIATE (.400")
For scopes with an objective up to 50mm and a standard barrel contour

HIGH (.500")
For scopes with an objective up to 56mm and a standard barrel contour

X-LOCK MOUNTING SYSTEM SCOPE RINGS AND BASES FOR X-BOLT RIFLES

- Eliminates alignment problems and loose connections between bases and rings.
- Choose from integrated mounts in Standard, Intermediate and High rings.
- Available for both 1" and 30mm diameter scopes.
- X-Lock bases are machined from solid steel, and mount with four base screws per base at each corner, offering more accurate placement of the base on the receiver (See diagram on page 56).

B25 SUPERPOSED

The most requested Custom Shop model is the legendary Superposed, the last design undertaken by John M. Browning before his death in 1926 and the culmination of his firearms ingenuity and wisdom. The Superposed is the finest and most respected over and under design ever. As in all of Browning's work, the Superposed delivers perfect balance, economy of proportion and eye-appealing design. As beautiful as a custom Superposed is, it deserves to be carried afield and used, just as Mr. Browning intended.
